SUMMARY

Staff infrastructure engineer with 15+ years owning production platforms — one-command deployments, multi-cloud Kubernetes, cloud spend you can predict. From Virgin Galactic to Confluent's IPO to FedRAMP High Kubernetes at DTEX Systems, I turn fragile manual operations into automation — lately the layer underneath autonomous agents: multi-agent platforms, durable state, and agentic tooling that lets engineers and models ship real code together.

SELECTED IMPACT

- **One command, one hour, any cloud** — built and own a multi-cloud Kubernetes "deployment factory" (Terraform/OpenTofu) that turns standing up a customer environment from days of manual work into about an hour.
- **Cut cloud spend 45%** — 30% in the first pass, 45% overall, largely by replacing manual cost hygiene with Cloud Custodian policy automation.
- **Internal multi-agent AI platform** — Vertex AI + Copilot with a durable issue graph for long-running agent work; the team now reuses the blueprint for large-scale legacy refactoring.

EXPERIENCE

Site Reliability Engineer — DTEX Systems Jun 2024 – Present

Platform engineering for multi-tenant SaaS across commercial and FedRAMP High/Moderate environments.

- Built and own the multi-cloud Kubernetes "deployment factory": Terraform/OpenTofu IaC that turns standing up a customer environment from days of manual work into one command and about an hour.
- Cut monthly cloud spend **30% in the first pass and 45% overall**, mostly through Cloud Custodian policy automation.
- Built an internal **multi-agent AI platform** (Vertex AI + Copilot) with a durable issue graph for long-running work; the team now uses the blueprint for large-scale legacy refactoring.
- Built an agentic tool that assembles a full customer picture from Jira and Confluence in about 30 seconds.
- Standardized developer environments — mise for tool versions, Python tools via uvx, one-command GCP/AWS auth.
- SME for OpenSearch and GCP architecture; own continuous monitoring, vulnerability management, and patching with 24×7 on-call. Mentor engineers on AI-assisted development.

Sr. Cloud Systems Engineer / Technical Lead — Confluent Nov 2020 – Apr 2024

Infrastructure through pre-IPO, IPO, and post-IPO growth at the company behind enterprise Apache Kafka.

- Wrote and operated Go and Python infrastructure services on GCP Cloud Run, with CI/CD from GitHub through Cloud Build; deployed GKE with Terraform plus custom Go cluster-management tooling.
- Led a multi-quarter **Zero Trust network rollout** (Palo Alto) for a global workforce, writing the allow-list

automation so the cutover didn't interrupt anyone's work.

- Built proof-of-concept tooling to measure the blast radius of a proposed **GitHub EMU migration**, took findings to InfoSec, TPM, and Engineering leadership, and helped steer the decision to GitHub Enterprise.
- **Mentored 10 engineers** and ran continuous-learning efforts across the infrastructure teams.

Staff System Engineer — BlackLine Feb 2018 – Nov 2020

- Directed the migration of legacy infrastructure to GCP with Terraform.
- Ran the Atlassian stack in a high-availability setup; integrated SAP Resolve with Salesforce.
- Put cloud infrastructure under version control in GitLab; automated HRIS updates, server deployment, and patch management.

Senior System Engineer — Applied Minds Dec 2014 – Feb 2018

- Led the company's **NIST 800-171 compliance effort** and implemented the security controls behind it.
- Built real-time monitoring on the ELK stack in Azure; set up backup and disaster recovery.
- Migrated internal applications to AWS on time and on budget; maintained **99.99% uptime**. Led an Exchange → Office 365 migration.

Senior Systems Engineer — Virgin Galactic Jul 2012 – Nov 2014

- Ran high-availability clusters for critical services and scripted their installs.
- Owned network security: firewalls and intrusion detection.
- Led the storage migration to SANs and Dell PowerVaults; integrated Linux servers with Active Directory. Promoted from System Administrator.

Server Support Engineer — Publix Super Markets Mar 2007 – Jul 2012

SKILLS

Core	Kubernetes · Terraform / OpenTofu · Python · Go
Cloud	AWS · GCP · Azure
Platform & DevEx	CI/CD · Ansible · mise · uvx · Make · Git
AI Infrastructure	Multi-agent orchestration · MCP / agentic tooling · Vertex AI · Copilot
Security & Compliance	FedRAMP (High/Moderate) · NIST 800-171 · Zero Trust · vulnerability management
Data & Observability	OpenSearch · Apache Kafka

RECOGNITION, WRITING & EDUCATION

"He built the core Terraform automation for a greenfield FedRAMP environment that dramatically minimized deployment time... He moves fast without cutting corners." — Craig B., colleague at DTEX Systems

Writing: "From Chatbot to Housemate: Building a Truly Autonomous Agent" — LinkedIn, Feb 2026. 4 recommendations on LinkedIn · Technical Mentor, Princeton University.

Certifications: AWS Certified Solutions Architect – Associate · Polk State College, 2005–2006 · CFCC, 1999–2001
